R V I
C E .

The best from experience

Thanks to decades of experience, we develop targeted, optimal solutions for our customers. To this end, highly specialized teams are put together according to our customers' needs and offer worldwide full-service support. From technical planning and implementation to logistics. For us, this also includes the strategic development of software-supported processes at the customer's site.

More than digital printing

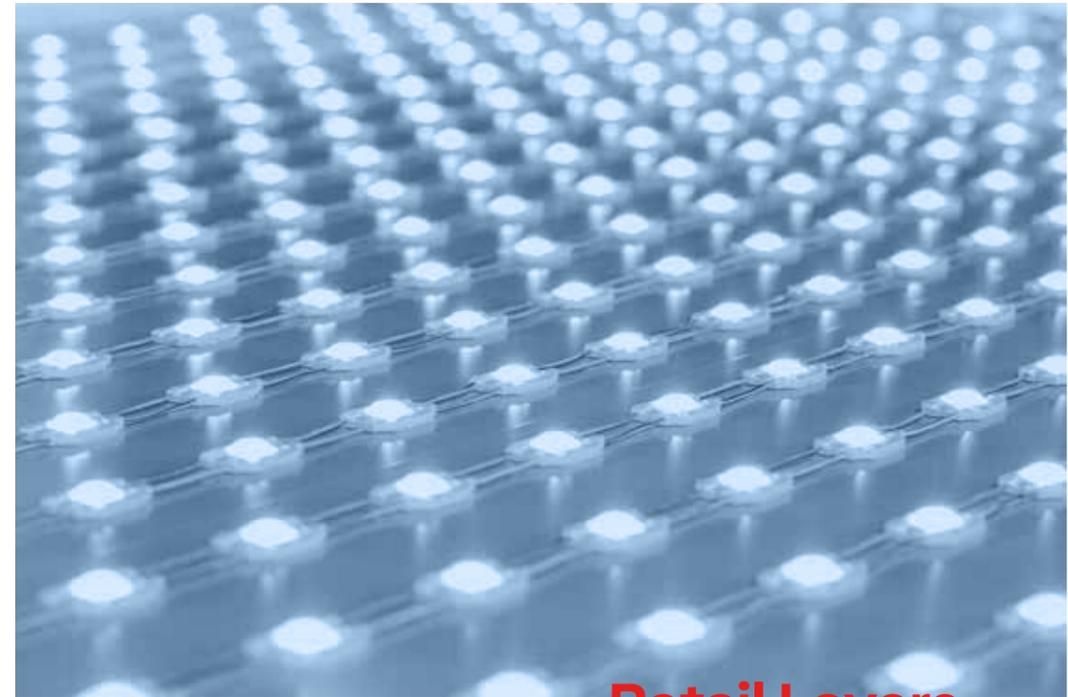

We are solution-oriented service providers for large-format image production. Large volumes in a short time and in the best quality. No problem at all. With one of the most modern machine parks in Europe, we are constantly working on our own developments. This enables us to always offer our customers the best solutions in the areas of LED, frame, UV, and sublimation printing.

Retail Lovers

At TREVISION, we specialize in large-scale LED complete solutions for indoor and outdoor use. In order to best meet individual customer requirements, our technical teams take care of the entire planning, implementation, and installation of lighting and frame solutions. Our own Smart Store Concept Team develops solutions for the store of the future.

Circular and spectacular

We take the circular economy very seriously and are also a government-registered recycling company. As an “integrated manufacturer and recycler,” we are global industry leaders and are also permitted to accept our customers’ old products as waste across borders and use them to manufacture new products. Our large-format prints thus offer visual experiences that impress not only with their size and precision, but also with their responsible implementation. This is our contribution to sustainability in practice.

We think and act globally

Central production facilities in Austria and Hungary, partner production facilities in Switzerland, India, and Canada, as well as sales offices in Austria, Germany, Italy, and the Netherlands.

MACHINE PARK*

Our machinery is among the most modern in large-format printing – designed for high production reliability, short response times, and consistently strong results. Across several thousand square meters, we combine powerful printing and finishing technologies that cover all requirements in the large-format sector: from high-resolution UV roll and plate printing to brilliant textile sublimation printing.

Thanks to our infrastructure, we can implement campaigns and projects of any size – from individual motifs to comprehensive out-of-home and POS solutions with more than 1,000 square meters of print area per motif. Our continuously modernized systems ensure maximum efficiency, repeat accuracy, and color consistency.

**/ You wish, we print. No matter
the place, no matter the size.**

ADVERTISING & SUSTAINABILITY CAN GO HAND IN HAND.

Circular and spectacular.

We take the circular economy extremely seriously and are an officially licensed recycling company. As an integrated manufacturer and recycler, we are a global industry pioneer and are authorized to accept end-of-life products from our customers across borders and transform them into new products.

Our large-format prints deliver visual experiences that impress not only through their scale and precision, but also through their responsible execution.

With our ONETWOMORROW® recycling process, we turn this vision into reality and create a sustainable solution for the future.

Certification

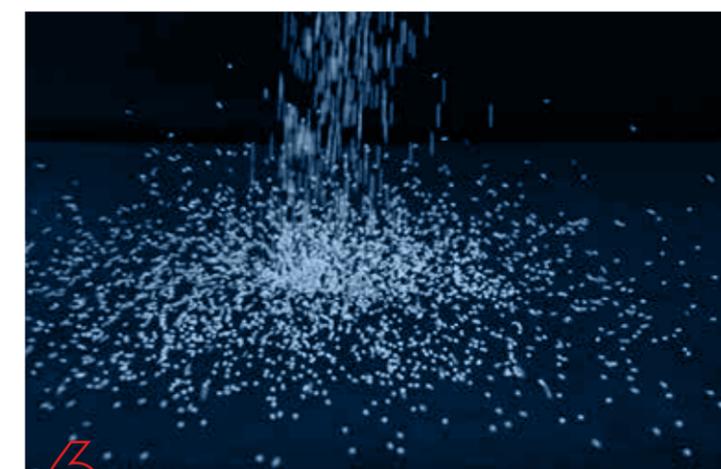

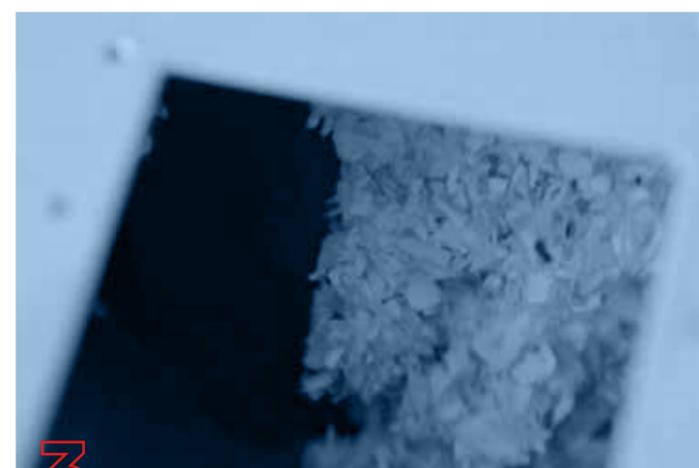

All material flows within our ONETWOMORROW® process – from collected waste to newly produced regranulates – are certified by Johannes Kepler University Linz. All stakeholders along this value chain receive an annual certificate documenting their achieved CO2 savings. The only alternative to this process remains the costly and climate-intensive incineration of used end-of-life products.

The ONETWOMORROW® process is linked to the main production at Trevision. When production takes place with us, additional compatible PET print products from other production environments can also be integrated into the recycling loop within the same project. This ensures that all materials are processed in a controlled, traceable manner and in line with a fully functioning circular system.

Our sustainability managers are happy to support you on your journey.

Logistics

End-of-life advertising textiles can be returned to us easily in collection boxes, either palletized or shipped as parcels. Depending on requirements, collection can take place directly at retail locations or at existing consolidation warehouses. Alternatively, customers may also deliver the boxes to us directly. This removes any barriers to a future-oriented “tomorrow” for our industry.

WHAT YOU SEE

Retail & POS – Spaces that sell.

In retail, space is decisive.

Shop windows, entrance areas, promotional zones or checkout areas – every surface is a valuable touchpoint. To ensure your brand remains visible in-store, it takes a precise combination of visual merchandising, in-store communication, and flexible system solutions for rapid campaign changes.

The challenge in-store

Seasonal campaigns, promotions, varying store layouts, and international rollouts all increase complexity. Stores require perfectly matched kits, location-specific variants, and materials that integrate seamlessly into frame systems, lightboxes, textile tension frames, or digital signage. At the same time, brand consistency must be maintained across all stores. This is exactly where we come in.

Our retail expertise

For many years, we have supported retailers across a wide range of industries and speak the language of visual merchandising teams, retail operations, and marketing. We deliver:

- **Window & VM concepts:** backlits, textile frames, stickers, 3D elements
- **In-store communication:** promotional zones, signage, POS displays, ceiling hangers
- **Campaign rollouts:** store-specific kits, variant management, international coordination
- **System solutions:** LED frames, tension frames, interchangeable textile graphics

- **Seamless analog & digital integration:** print solutions combined with digital signage and software partners

How we deliver retail projects

Every project starts with an analysis of your spaces, campaigns, and systems. This is followed by technical concept development, material and format consulting, large-format printing, store-specific logistics, and the coordination of installations and changeovers. Where required, we also integrate software solutions from our partner network.

Your added value

- Consistent brand presence across all stores
- Reduced coordination effort for marketing and retail teams
- Fast, precise campaign changeovers
- High-quality, retail-ready materials and prints
- International scalability – from single locations to large-scale retail networks

Outdoor advertising & architectural branding – brands at scale.

Buildings, facades, and open spaces are powerful communication surfaces. Whether megaboards, facade wraps, or mesh banners: outdoor advertising must stand out—while also being planned to technical, structural, and organizational perfection.

Complexity in outdoor environments

Out-of-home projects combine visibility, safety, and regulatory requirements. Wind loads, substrates, fire protection, structural integrity, installation concepts, and traffic management must be considered at an early stage—especially for large-scale building wraps. At the same time, execution must precisely reflect the corporate design and remain internationally scalable.

Our strength: technical planning & execution

We combine large-format digital printing with comprehensive project planning—from concept to installation. Our scope of services includes:

- **Consulting and feasibility studies for large surfaces and architectural wraps**
- **Material and system selection: mesh, PVC, textile, tension frame systems, custom constructions**
- **Structural planning and documentation with specialized engineering partners**
- **Project management and process planning with clear timelines and safety concepts**
- **Professional installation—from aerial work platforms to specialized mounting solutions**

How outdoor projects work with us

- On-site analysis and definition of advertising areas
- Clarification of approvals, structural requirements, and permits
- Development of the technical concept, including fastening systems
- Production of large-format prints to the highest quality standards
- Coordination of installation, traffic management, and final acceptance
- Optional: dismantling and sustainable reuse of materials

Your benefits outdoors

- Maximum visibility through precisely planned large-scale applications
- Highest safety standards through structural and technical engineering
- International applicability—from single sites to full campaigns
- Durable, tested, and long-lasting materials
- One central point of contact for concept, engineering, printing, and installation

Pool + Wellness City

Live & Event – Brand experiences in the moment of engagement

Live events focus attention: sports events, brand activations, open-air events, or roadshows. Whether grandstand banners, large-format graphics, wayfinding systems, or temporary branding surfaces—everything must perform visually with precision and function with technical reliability to carry the moment.

The challenge in live environments

Live productions are dynamic: short setup and dismantling times, changing locations, and variable structures. Visitor guidance, safety, and optimal placement of sponsor and branding areas are critical. At the same time, brand visuals, wayfinding systems, and informational graphics must create a cohesive overall experience—even across international event series.

Our live & event expertise

We support brands and organizers across the full spectrum of live communication—from stadium perimeter branding to complete event outfitting. Our portfolio includes:

- **Stadium & sports venue branding:** grandstand banners, perimeter boards, tunnel graphics, backdrops
- **Indoor & outdoor event branding:** entrances, backdrops, sponsor walls, hospitality areas
- **Wayfinding & orientation:** directional signage, zone identification, floor graphics
- **System solutions for rapid changeovers:**

tension frames, banner systems, modular structures

We work closely with event agencies, technical teams, and venues to ensure all disciplines come together in a cohesive live experience.

How we deliver live & event projects

- Analysis of the venue, visitor flows, and communication zones
- Material and system recommendations for indoor and outdoor use
- Data checks and print optimization
- Production of textile graphics, banners, signage, and floor applications
- Logistics directly to the venue—internationally if required
- On-site support for setup and dismantling by experienced teams

Your added value in live & event

- Distinctive brand appearances, seamlessly integrated into venue and technical environments
- Clear visitor orientation through well-designed wayfinding systems
- Robust, safe solutions for high-traffic areas
- Reliable execution despite tight timelines and changing locations
- International scalability for event series and tours

Digital Signage – Digital surfaces that make an impact

Displays, LED walls, and interactive systems are core elements of modern brand environments. To unfold their full impact, hardware, content, and the surrounding analog environment must work together with precision.

The challenge of digital surfaces

Digital signage rarely fails because of technology itself, but because of poor integration into the overall concept: optimal positioning, lighting conditions, sightlines, suitable formats, and seamless integration into existing store and campaign structures. Added to this are international rollouts and the balance between centrally managed content and local requirements.

Our role in the digital signage ecosystem

We see digital surfaces as part of a holistic communication system—and combine retail and print expertise with technical digital signage implementation:

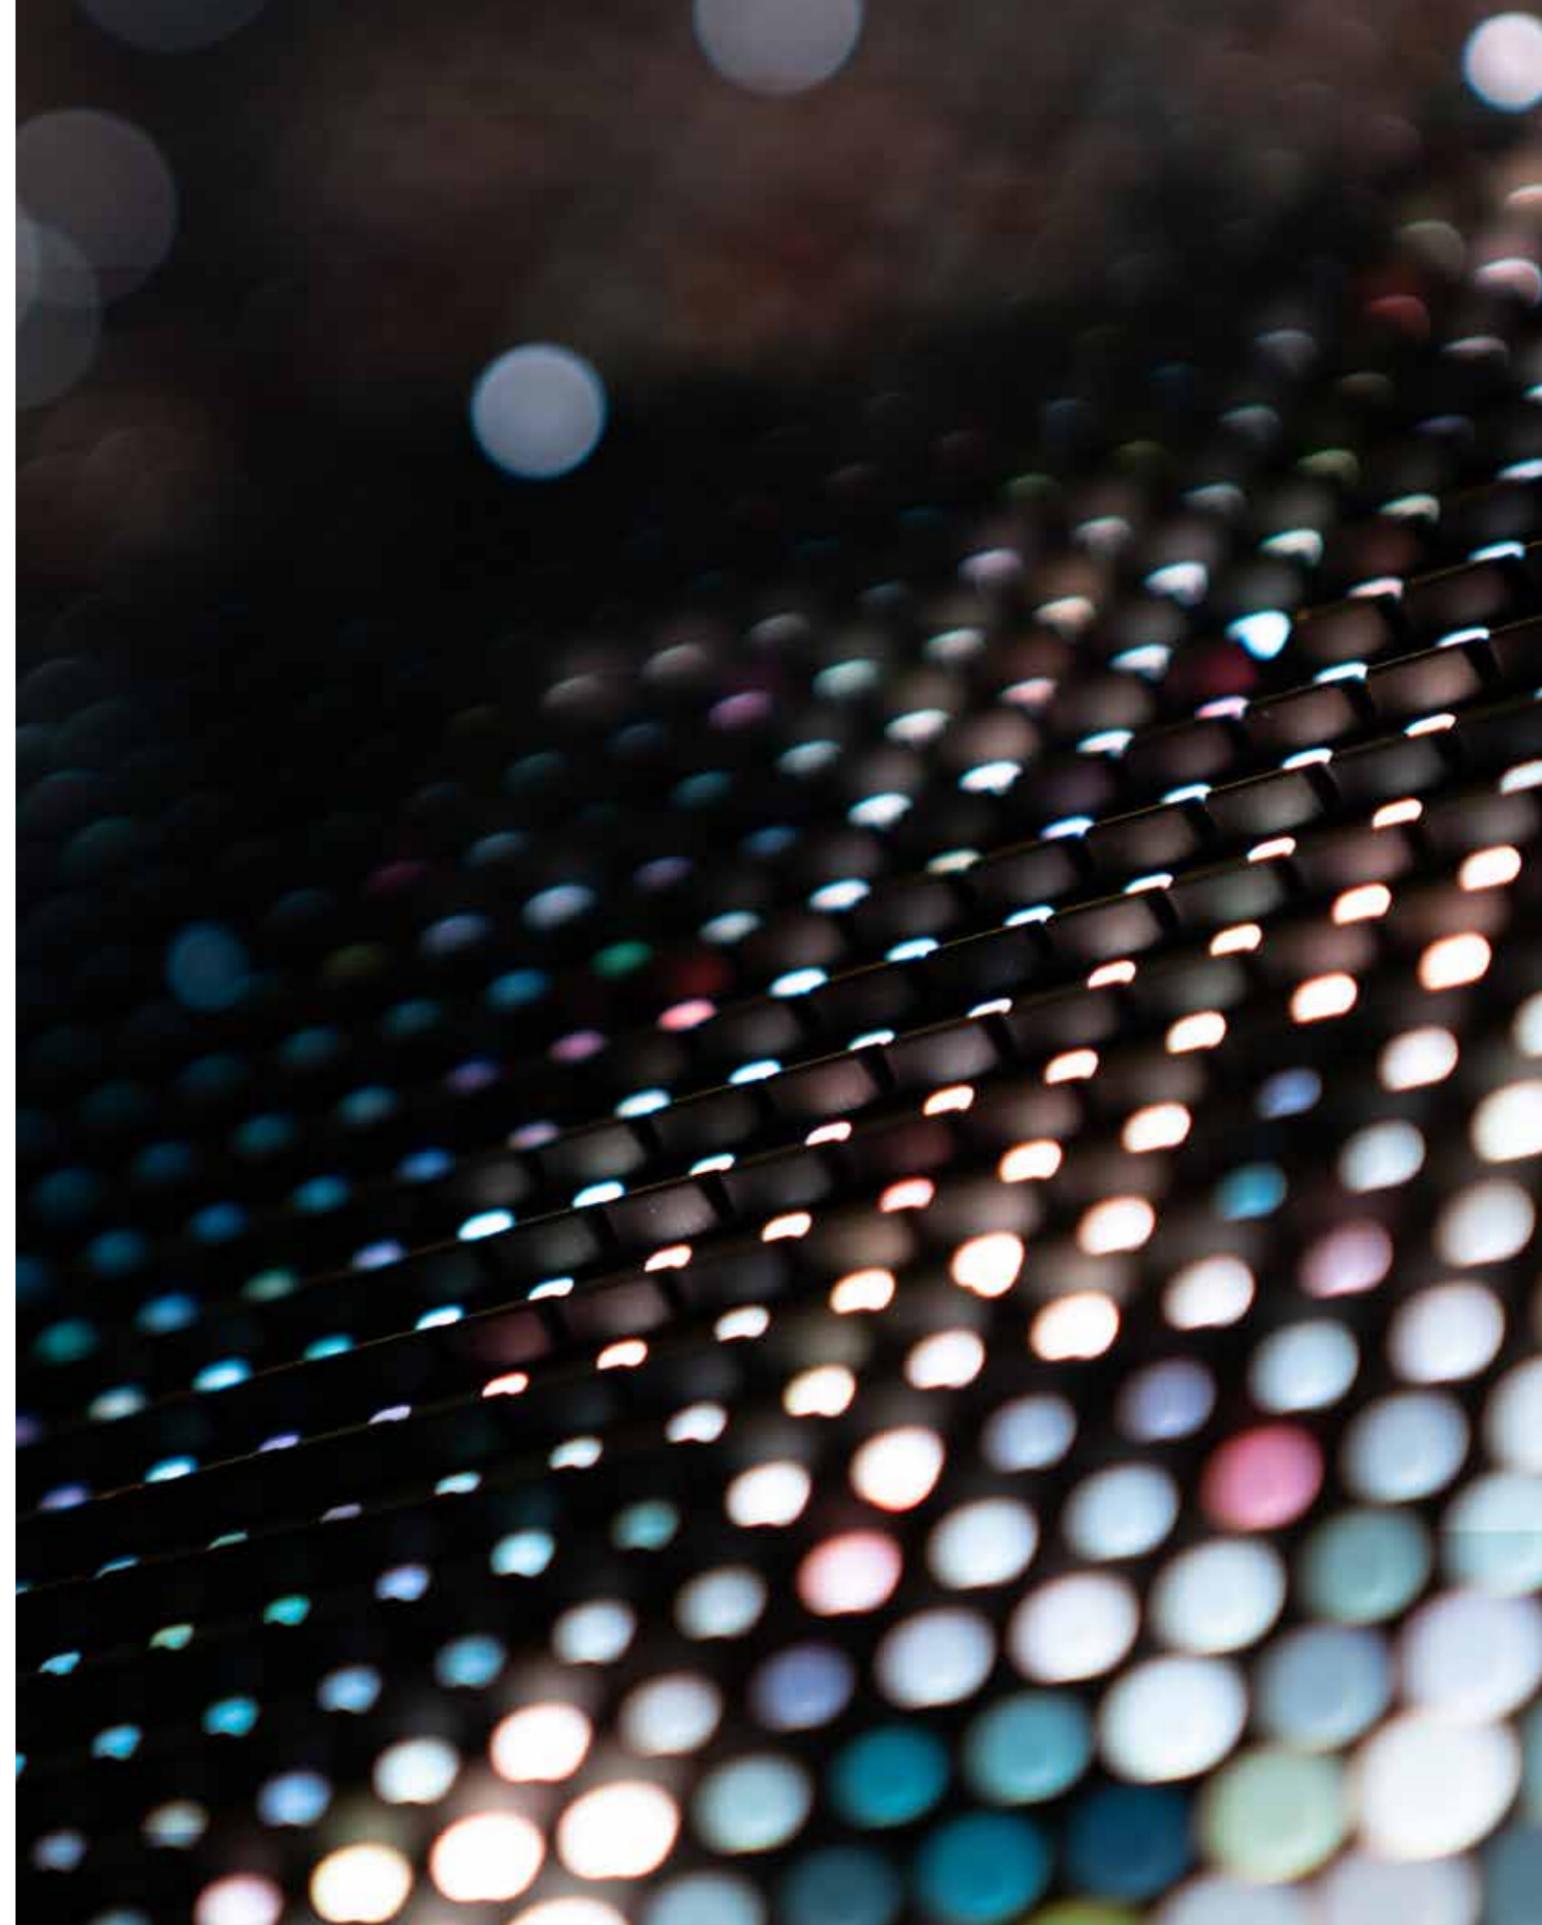

- **Consulting on display and LED wall positioning and format selection**
- **Integration into architecture and existing analog communication surfaces**
- **Installation and commissioning of hardware and media players**
- **Connection to content and campaign structures in collaboration with IT and marketing**
- **Coordination with creative and content agencies to ensure a consistent brand experience**

How digital brand surfaces come to life

- Analysis of the customer journey and relevant touchpoints
- Recommendation of suitable display sizes, LED technology, and mounting points
- Detailed planning including power supply, cable routing, and mounting
- On-site installation and functional testing
- Team training for operation and ongoing use
- Optional: integration into modern software solutions for centralized control

Your added value through digital signage

- Maximum visibility at the point of sale and within architectural spaces
- Centralized, cross-location campaign management
- Harmonious interaction between digital and printed media
- Future-proof technology with flexibility for new content

Fleet branding – your brand on the road

Vehicle fleets are mobile brand ambassadors. Every journey creates valuable touchpoints. Turning individual vehicles into a consistent fleet media system requires durable tarpaulins, reliable frame systems, and clearly structured processes for design and changeovers.

Challenges in fleet environments

Trucks are in daily operation—across long distances and in all weather conditions. Tarpaulins and graphics must withstand wind, dirt, UV exposure, and mechanical stress. Different vehicle types, country-specific regulations, and safety requirements add complexity. At the same time, visuals need to be quickly interchangeable, for example for seasonal campaigns.

Our fleet media expertise

We develop solutions specifically designed for the demands of everyday fleet operations:

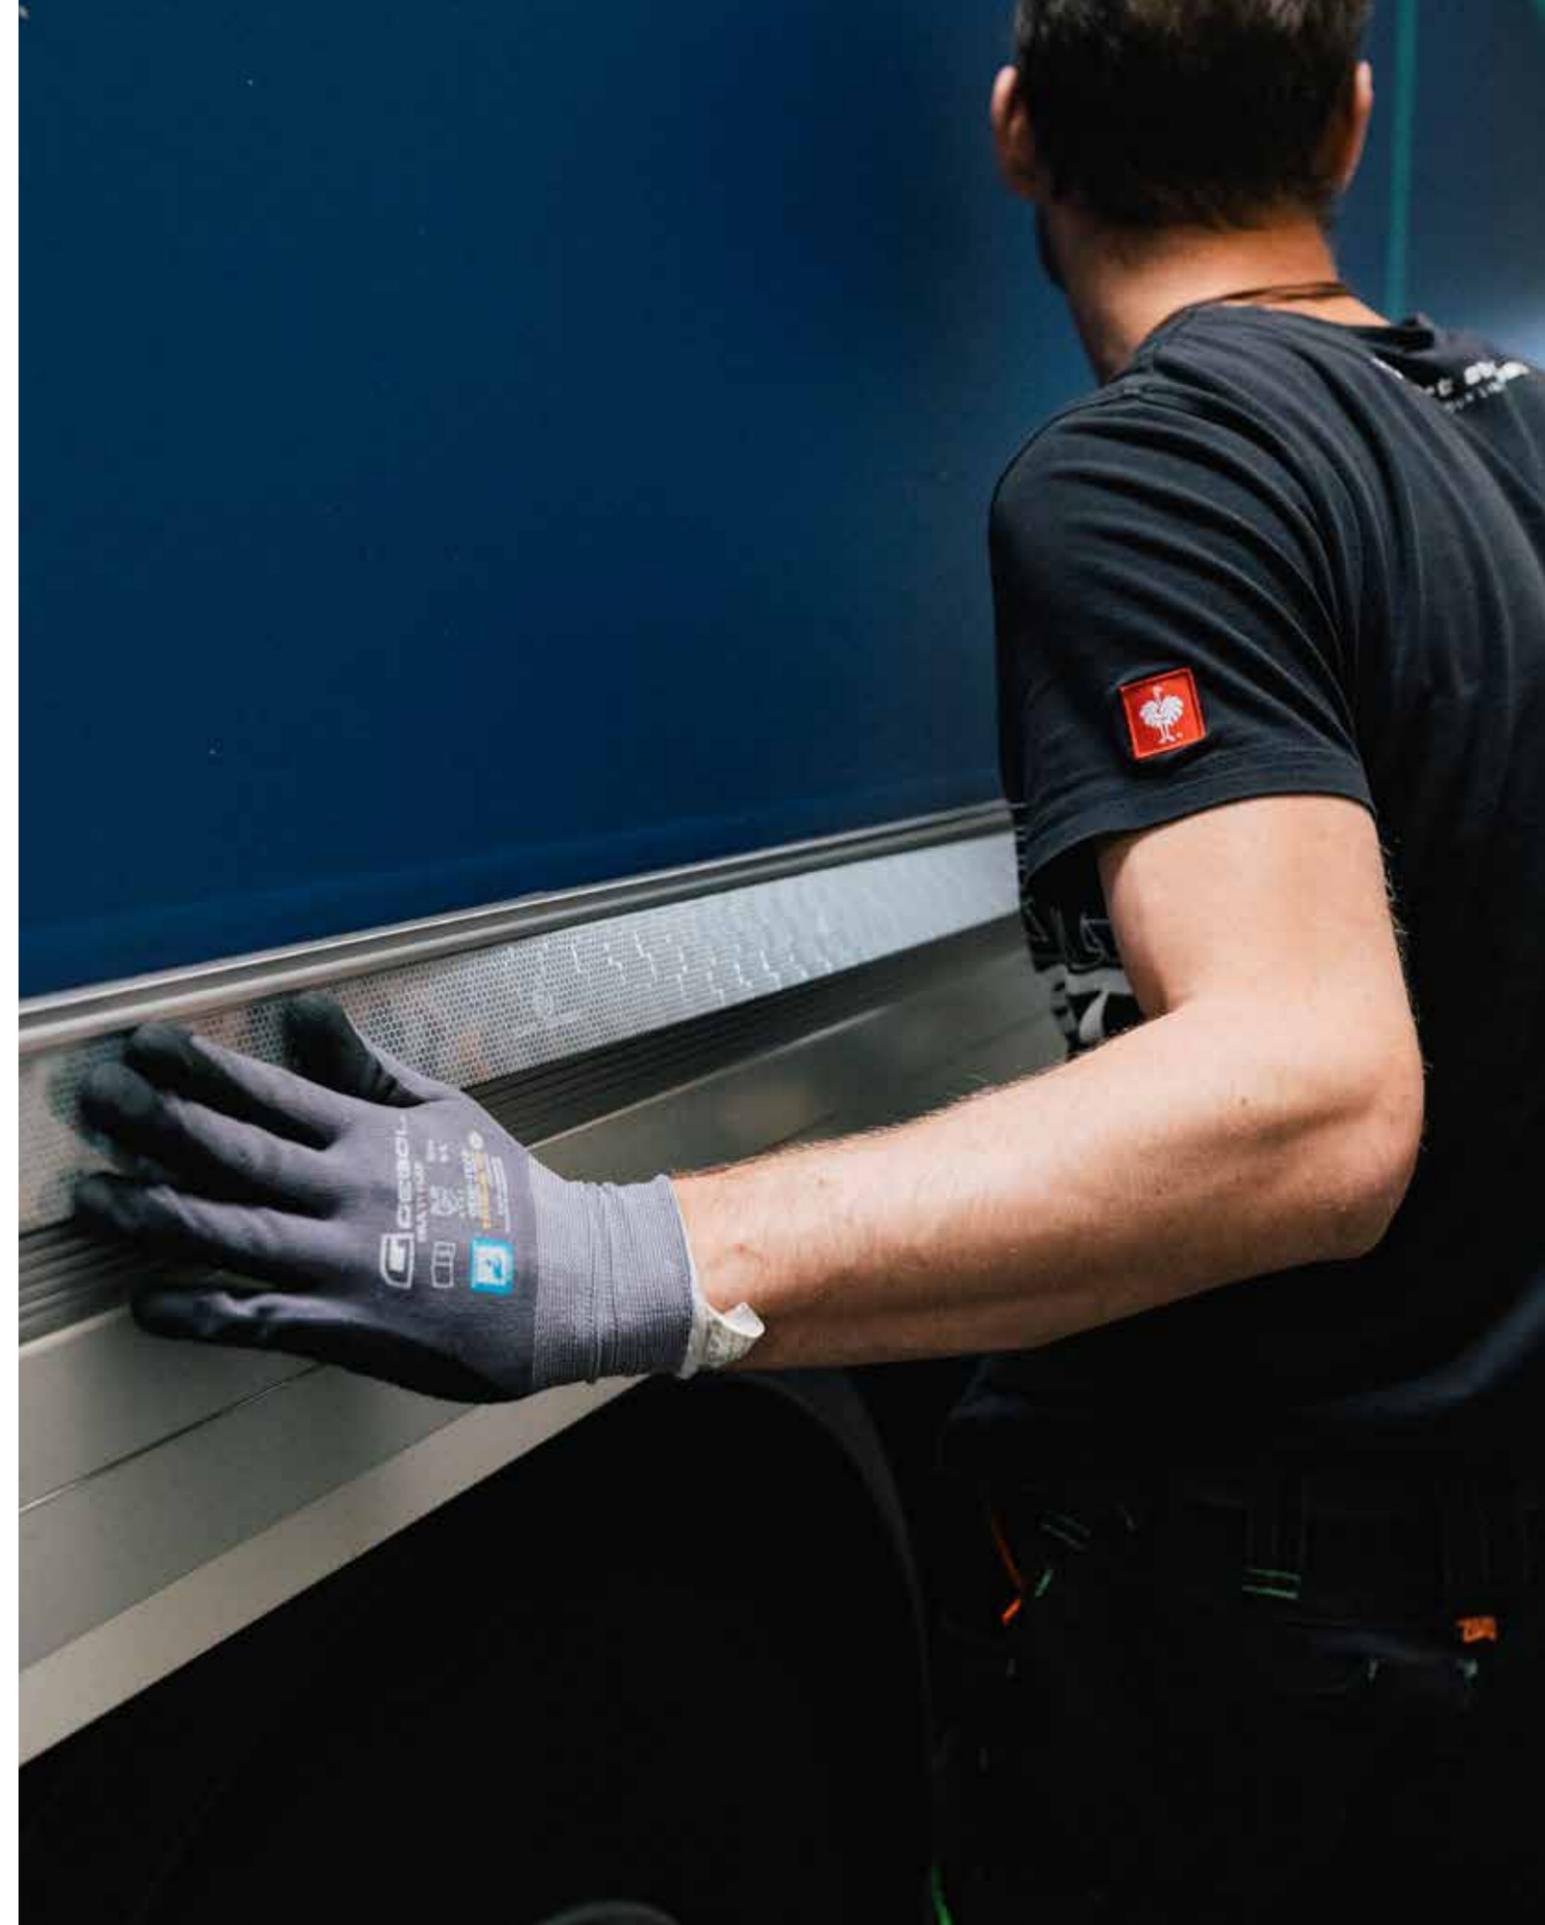

- **High-quality prints for truck tarpaulins and tensioned textiles**
- **Exchange and frame systems for fast visual changeovers**
- **Consulting for consistent brand management across all vehicle types**
- **UV-resistant prints and long-lasting materials**
- **Process and installation planning in close coordination with fleet management and workshops**

How we support your fleet

- Recording of all vehicle types and quantities
- Development of a consistent design concept
- Production of tarpaulins, exchange systems, and replacement graphics
- Organization of installation via workshop partners or on site
- Creation of clearly structured fleet kits
- Long-term support for replacements and expansions

Your added value with fleet media

- Consistent brand impact across the entire fleet
- High material durability for continuous operation
- Fast visual changes with minimal effort
- International usability across different markets
- Smooth processes that do not disrupt daily operations

Trade fairs & stages – spaces where brands take the stage

Exhibition stands, presentation areas, and stage sets are three-dimensional brand environments. They must communicate content clearly, create strong visual worlds, and integrate seamlessly with architecture, lighting, and movement. Large-format textile graphics and flexible system solutions form the foundation.

The specifics of trade fairs & stages

Trade fairs and stage productions follow strict requirements: tight setup and dismantling schedules, venue regulations, fire safety standards, rigging-capable constructions, and defined sightlines. Graphics must fit with millimetre precision, allow for variable setups, and remain easy to transport and store. With only seconds to capture attention, visual clarity is essential.

Our expertise for trade fair appearances & stage design

We support brands, exhibition builders, and stage designers with high-quality print and system solutions:

- **Exhibition graphics & systems: textile tension frames, exhibition walls, ceiling hangers, back walls, cladding**
- **Stage sets & backdrops: large-format backdrops, scrims, gauzes, masking elements**
- **Lighting solutions: lightboxes, backlit graphics, and illuminated walls**
- **Stage-ready materials: lightweight, durable, flame-retardant textiles—also suitable for touring**

We combine the technical requirements of exhibition and event technology with the visual demands of brand and creative teams.

Where conceptual services are required, we collaborate with specialized partner agencies.

How trade fair & stage projects come together

- Joint briefing with exhibition construction, scenography, and technical teams
- Selection of suitable materials and systems based on setup times, transport routes, and reusability
- Data checks and layout adaptation for exhibition and stage formats
- Production including finishing (eyelets, pole pockets, keder, custom shapes)
- Logistics to exhibition halls, venues, or storage—internationally
- Optional: on-site support during setup, test rigging, and final adjustments

Your added value with trade fairs & stages

- Strong brand presence in exhibition halls, theatres, studios, and event locations
- Precise fit of graphics in complex spatial and stage environments
- Reusable systems for multiple deployments and tours
- Reliable processes between layout, production, and live execution
- International scalability for single appearances or entire series

Stage Art

EasyOn® Wall – wall design without compromise

EasyOn® Wall is our textile wall covering for anyone looking to create impactful spaces—without the usual limitations of traditional wallpaper. Perfect for hotels, retail spaces, offices, and high-traffic commercial environments.

Rethinking wallpaper

Conventional wallpapers consist of multiple strips—with visible seams, lifting edges, and challenging pattern alignment. At the same time, demands for durability, ease of maintenance, and sustainability continue to rise. EasyOn® Wall addresses these challenges with a seamless system: one single, continuous panel—no joints, no misalignment, no edges that can lift.

Key benefits

EasyOn® Wall combines design, functionality, and responsibility:

- **Seamless, single-piece application—
one wall as one image**
- **Robust and durable for intensive
commercial use**
- **Washable and easy to maintain—ideal
for corridors, lobbies, meeting rooms,
and retail spaces**
- **Fully customizable printing—
photographic images, graphics, or
subtle textures**
- **Versatile applications—for hotels,
stores, offices, hospitality, and more**

From wall surface to spatial concept

- Measurement and assessment of the substrate
- Layout of the design for a continuous wall effect
- Production of the single-piece panel in the required format
- Professional installation by trained teams
- Optional: low-residue removal and replacement

Design with responsibility

EasyOn® Wall is durable and designed for sustainable use. On request, we integrate recycling and material loops and take back end-of-life designs for reuse. The result is wall design that convinces aesthetically—while conserving resources.

Software solutions – clarity in store management

The more complex the store landscape, the more important structured, digital processes become. Campaigns, store data, ordering, and reporting belong in clear workflows—not in emails and Excel spreadsheets.

The challenge in store management

Marketing and retail teams today manage multiple campaigns, formats, and locations at the same time. Without the right software, this leads to fragmented workflows, duplicated data maintenance, and delivery errors. Especially for international rollouts, transparency, inventory visibility, and store-specific information are critical.

What our software solutions deliver

We work with specialized tools and help structure store processes efficiently:

- **Centralized digital store and media database**
- **Campaign and rollout planning by store, region, or country**
- **Defined ordering and approval workflows between headquarters and stores**
- **Reporting and analytics on orders, usage, and budgets**
- **Interfaces to existing systems (e.g. ERP, inventory management)**

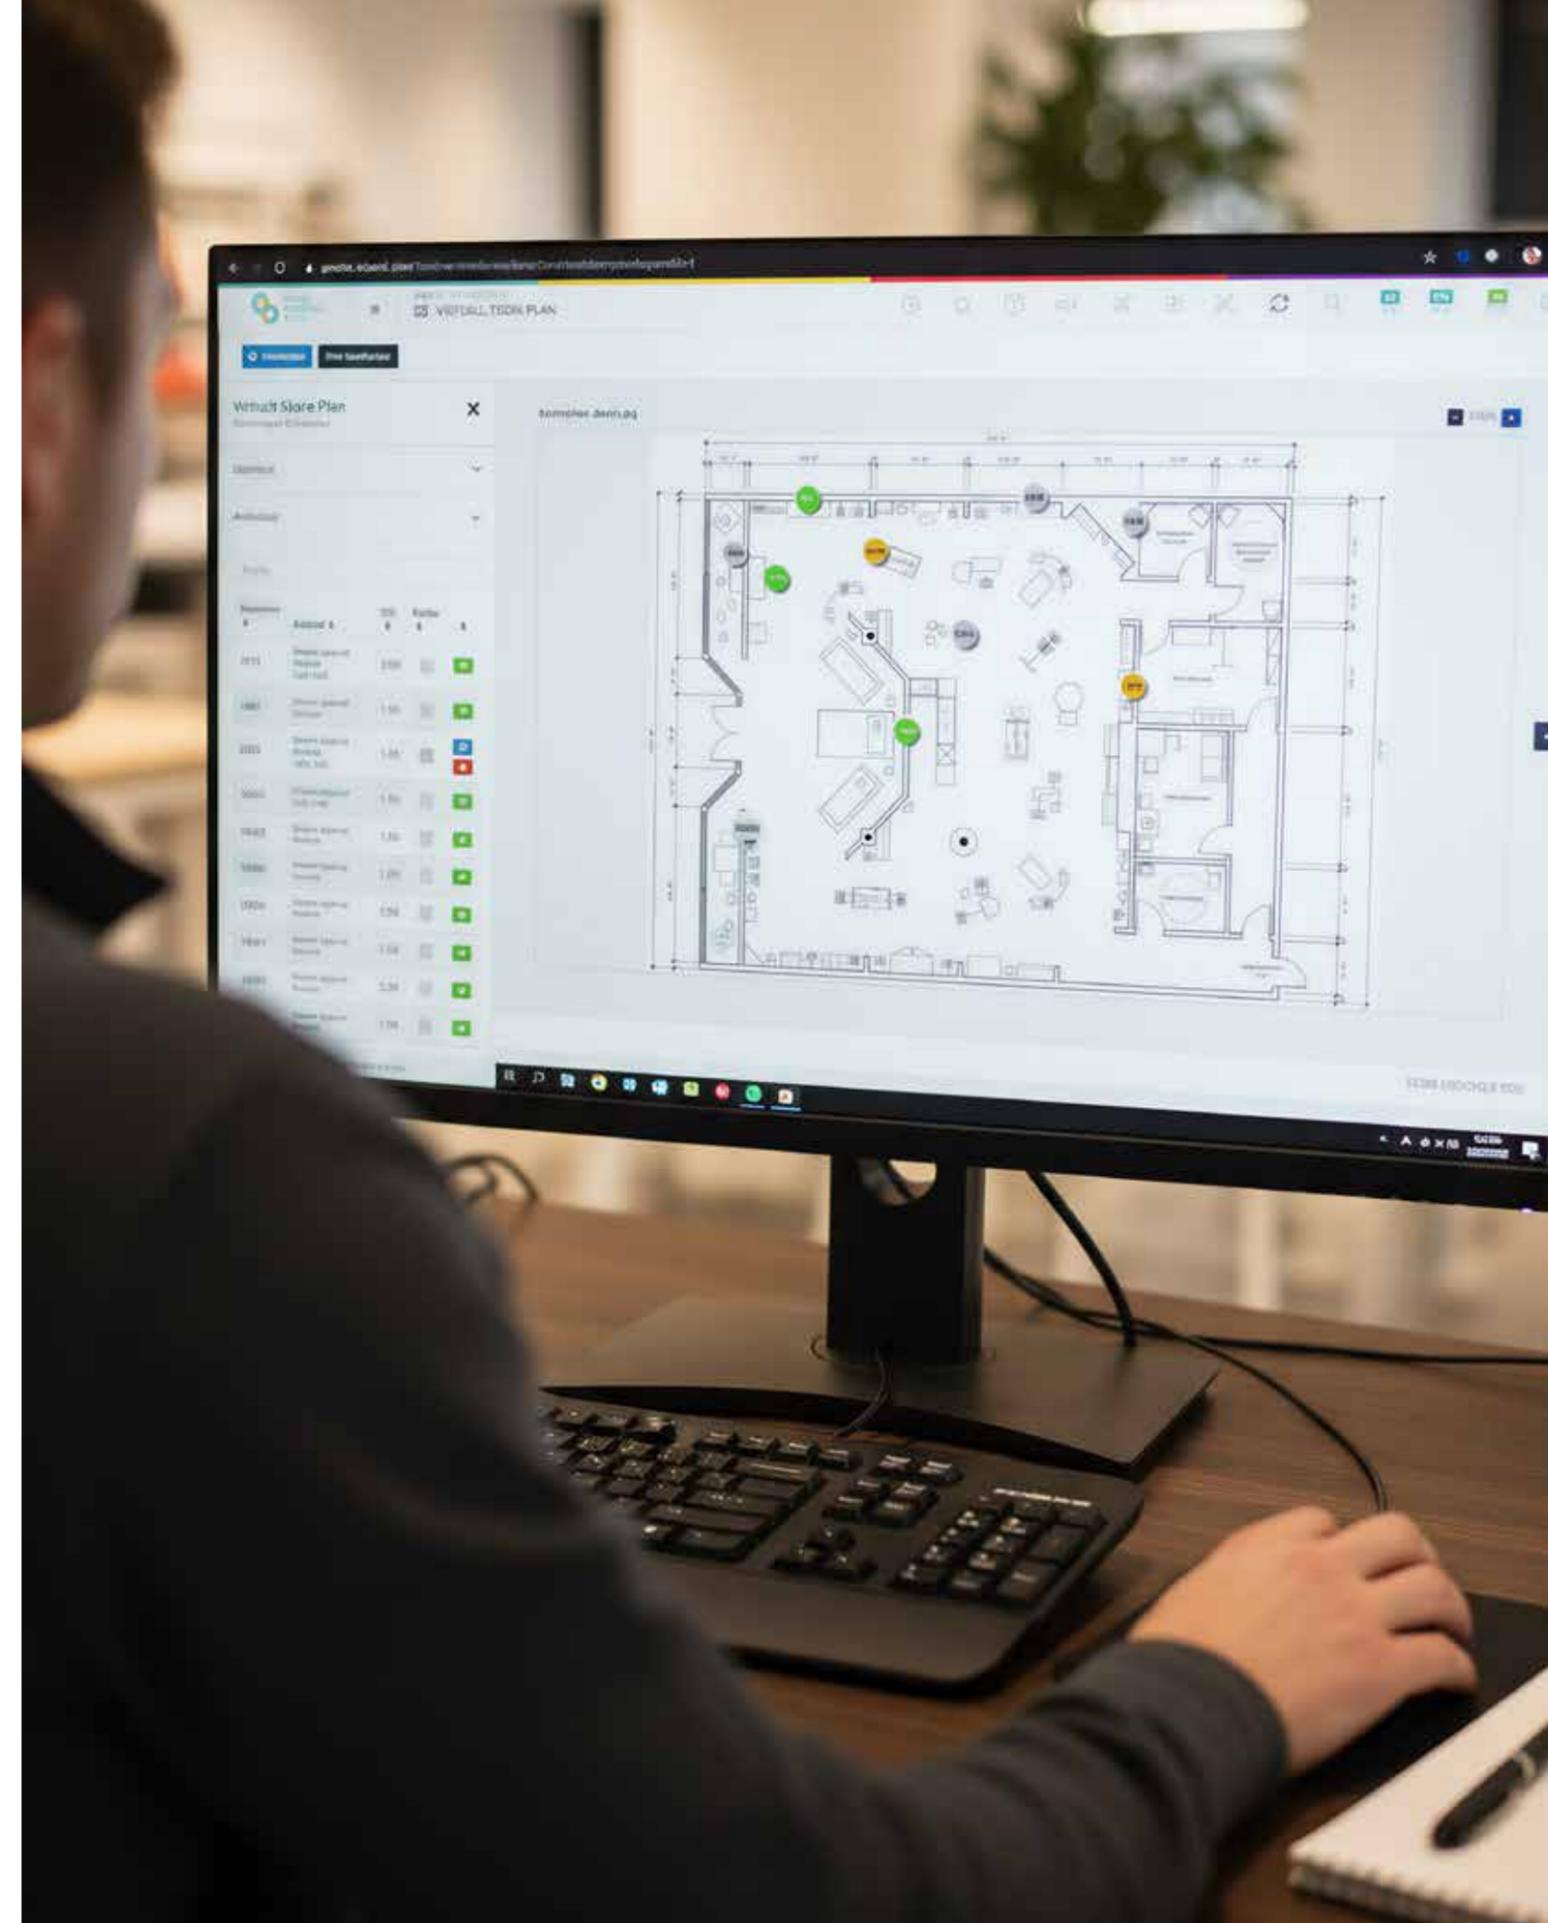

For creative or CI-specific software, we refer to suitable partners from our network.

How we support your digital transformation project

- Analysis of existing processes and data sources
- Definition of clear objectives (e.g. fewer errors, faster rollouts)
- Recommendation of suitable software solutions
- Support during technical and organizational implementation
- User training and ongoing optimization
- Seamless integration of software, production, logistics, and rollout processes

Your added value through digital workflows

- Reduced effort and fewer errors in store and campaign management
- Faster response times—even across international markets
- Transparent data foundation for informed decision-making
- Seamless flow from planning through production to distribution
